ACADEMY

# AUTOIMMUNE NEPHROLOGY WEBINAR SERIES

## EPISODE 1:

**The Role of PLA2R & Other Biomarkers  
in the Diagnosis of Membranous Nephropathy**

FEBRUARY 17<sup>TH</sup> 2022 | 11-12:30PM EDT

## EPISODE 2:

**The Role of PLA2R Testing in Pre-and Post-Renal  
Transplant Monitoring in Membranous Nephropathy**

MARCH 24<sup>TH</sup> 2022 | 11-12:30PM EDT

The autoimmune kidney disorder primary membranous nephropathy (MN) is commonly caused antibodies directed against the PLA2R receptor of the kidney. In many patients with MN, kidney transplantation is ultimately needed. However, in MN patients having PLA2R antibodies, the risk of relapse following transplantation is high. Recent guidelines for the management of glomerular diseases have highlighted how a non-invasive strategy, PLA2R antibody testing, can be used to evaluate the risk of relapse following kidney transplantation. In this webinar, Dr. Jean Francis will speak about the significance of kidney transplant in MN patients and highlight the testing strategy for pre- and post-transplant evaluation.

**SPEAKER:**  
**Jean Francis, MD**

Medical Director of Kidney Transplantation  
Boston University Medical Center (BUMC)

## EPISODE 3:

**Detection of PLA2R and Other Antigens in Renal  
Biopsies as a cause of Primary Membranous Nephropathy**

APRIL 21<sup>ST</sup> 2022 | 11-12:30PM EDT
